THIS PAGE IS INTENTIONALLY LEFT BLANK

:::: Trans Universe Theory [&] ::::

A unification of special relativity, superposition, electromagnetism, social and dimensional between-space, & -----

There are smallest segments of universe, measuring where [/non/matter] is most *probable* 2 exist in 1 unit &/or another. Overlapping. ~ computer pixels.

[Simulation? ----- irrelevant]

Universe pixels

Photons function as **qubits**:

[trans-metaphor; opposed to bits: cis-metaphor]

Photons **superpositioning**:

existing between / across / trans / both / & / in / multiple pixels simultaneously

matter & nonmatter & antimatter
& ∴ construction of space-time ---
necessitates a) **nonbinary reality**

Particles & waves antithesized -----

Photons exist across [trans] binaries
Functioning as both particle & wave

PREVIEW

:::: Relativity & decoding the constant c ::::

Light speed is dependent on the observer -----
an observer will always see light traveling at c
despite their speed

distance & time \therefore become **relative**
/ flexible / changing / & /

[Perception acts as dimension]

Consider special relativity ----- $E = mc^2$

c is a constant \therefore it might as well be 1
would it be poetry then, 2 say $E = m$?

the formula 2 unify mass & energy
 c is solely used 2 distinguish units

mass is energy
 \therefore in nonbinary universe logic
w/e measure energy in mass²

Alexis Pauline Gumbs said ----- 2 learn from o/ur
kin, in marine mammals: "fat is a winning strategy"
mass is energy & fat is energy & fat is 2 find a future.

orca whales --- o/ur oceans' defenders,
----- are easily 5,000kg² of energy

a blue whale is the energy of 120 tons²
the energy of the earth's oceans is [\pm]

[immense]

| a) photon & light wave have no mass [m=0]
but have velocity & carry energy (~11 joules) [E=11J]

$$\begin{aligned} & \& | E=m \\ & \quad 11=0 \end{aligned}$$

w/e're taught in school that this is impossible.

but Trans Universe Theory embraces impossibility

Numbers & the building blocks of o/ur universe do not exist in binaries.

∴ Fifteen can be zero.

Maybe speed of light travel is im-
--- possible ∴ light is everywhere

it is relative, & you ---- dear traveler ---- will be ---- relative to everything else ---- standstill

the only way to c ---
is become light itself

o/ur energy 11
& o/ur mass 0

:::: Deconstructing Binary Dimensions ::::

Special relativity theorists have already discussed perception (time's relativity) as 4th dimension, but what is between ---- & beyond ----- the 1, 2, 3, 4 of dimensions?

some things do not fit
a point, a line, an x,y,z

----- fractals occupy *non-integer dimensions* [nonbinary dimensions]

nonbinary physics necessitates transdimensions [dimensions \mathcal{R} spectral]

∃

--- functions to become photonic ---

----- $E = mc^2$ -----

----- $E/m = c^2$ -----

----- $E/0 = c^2$ -----

----- ["impossible"] -----

∴ it requires the impossible

∴ it requires words ----- [word = non-integer]

where might w/e find the impossible words?

[
catch m/e on the event horizon

& is beyond m/e

]

“kimo”

what words unlock unknown? ----- the infinite
unknown. m/y tears shed ----- mundane beside
infinity; the phrase between kwantum & infinite, lies
in scale. ----- relativity shows galaxies are not quarks.
----- *wasn't quark the fuckwad in ratchet&clank?*

the first ratchet&clank came out in 2002.
w/e knew quarks when *i* was 4 ----! m/y

dad always talkt of *harnessing the power of electrons,*
the spinning power of an electron!! --- what a dipshit.

sorry dad.
you got no consepction of scale. doing iowasca in toosan
w/ ur young-crusty gf doesnt reveel universal secrets

when *i* was 8 *i* learned u/v radiation kills cells, -so *i* thought *i* invented a) cure cancer ----- shooting u/v beams at cancer cells. *it's not so simple* m/y grandma said---- *they already do that with kimo. in a way.*

w/e played five crowns ----- w/ a girl named Ester. *she's my hero*, grandma said. --but Ester was cancer ridden. ---plane-dressed, white parents gazed at her back ----- her shiny kid-head watering grief, in polo-shirts&slacks, next to Ester's blue-dot gown, next to grandma's earthtone layars ---- & jemstones, next to m/y black longleeve, a flaming skull & patternd w/ arms riddled wornnholes, chewed at the cuff 2 stick m/y thumbs thru. 2 hide, so much //////////// m/e.

she was m/y first kimo --- incounter. maybe a phew years older. &she died next week. *i* watched silently, grandma heeved millenary tissues on the couch. -&

years later a kid in m/y highschool beet cancer -&i
watched their hair grow
back ----- that year. other kids shayed their heads
&eyebrows ---- rallying to *call me maybe* in the jim
in solidarity. *i* watched all their hair
grow back in fith-period Spanish. -&m/y other
grandma was diagnosed with cancer. *i* wached

her hair fall. first in wispy patches like-a baby's hed.
i visited ///// october -& she wear elton-john-wigs.
i hated it ∴
all m/y life her hair ----- was wound/tight red curls

i wined when she asked m/e 2 ----- make m/y own bed,
forced her to do it ----- silently watched her struggle
&grunt in pain ----- she remained grandmother/ed
that night. & she painted eyebrows when w/e went out,
dinner w/ m/y childhood dentist. he smiled sadly, said
you look great NθrMa

&*i*
watched tears slip silently down her face

november visited ----- &she only war thin orange scarfs
teyed over her bawled head. only ate vanila milkshakes

resting like a withered cricket on the black canvas couch
beside the kitchin table. her head was propped. propped
with the bright red pillo ----- her mother embroidered
m/y uncles name in every semitic language. bright-red-
wool. scratching neck-skin. i----- always hated that pillo,

spent hours tracing characters ---- names w/ m/y finger.

resting like dust ----- a cricket on the black canvas couch
beside the kitchin table. withered on her sun's name.

name meaning *son of red earth*. ----- their house-full
art&baubles clutterd every surface-- tishews, crumpuld
paypers. -----w/e cleard the basemint of generations
toys, comix, cowtches in floodwater. ----- split the carpit
down to bare spit-stained concreet.-----

December o/ur family flu to new jerzy, emergent fairwell.
No. ---- grandma begged, *dont look.* ---- her sunking eyes.
she died the night w/e saw *the hobbit* movie in theeters.

i remember exiting a yellow hallway & throwing m/y 3D
glasses across the room ----- into the carboard blue-
trash slot. & screeching for joy ---as m/y cousins clapped
m/y back proudly. w/e beet frozen rain off the rental car
windshield with o/ur bear fingers. ---- roring in tryumph
m/y quiet mother staid behind. ---- bedside. the mother,
----- she watched her die. the mother.
